SUMMARY

BCA graduate and Cloud/DevOps enthusiast with hands-on experience in AWS, Azure, Linux, Git, Docker, Kubernetes, Jenkins, Terraform, GitHub Actions, Helm, Prometheus, and Grafana. Built and deployed cloud infrastructure, 3-tier architectures, and end-to-end CI/CD pipelines with practical exposure to automation, containerization, and monitoring. Seeking an entry-level Cloud/DevOps Engineer role to apply technical skills and contribute to reliable, scalable, and automated cloud environments.

TECHNICAL SKILLS

Cloud Platforms: Amazon Web Services (AWS), Microsoft Azure

AWS: EC2, VPC, ALB, Auto Scaling, RDS (MySQL), S3, IAM, CloudFront, Route 53, Systems Manager, CloudWatch, SNS, Blue-Green Deployment, EBS, DNS

Microsoft Azure: VNet, VNet Peering, NSG, Load Balancer, Application Gateway, Traffic Manager, Azure VM, VM Scale Sets (VMSS), Azure Monitor, App Service, Storage Account, Recovery Services Vault, VPN, Azure Front Door, Logic Apps

DevOps & CI/CD: Git, GitHub, GitHub Actions, Jenkins, CI/CD Pipelines, Docker, Kubernetes, Terraform

Kubernetes: Amazon EKS, Deployments, Services, ConfigMaps, Secrets, Ingress, HPA, Namespaces, Helm

Networking & Security: Subnetting, Route Tables, Security Groups, NACLs, NSGs, IAM, WAF, CloudTrail, VPC Flow Logs

Monitoring & Observability: Prometheus, Grafana, Amazon CloudWatch, CloudWatch Alarms, SNS, Azure Monitor, Log Analytics

OS & Scripting: Linux, Ubuntu, Windows, Bash, Python, PowerShell

Web Servers & Databases: Nginx, Apache Tomcat, MySQL

PROJECTS

Three-Tier Architecture on AWS | <https://github.com/Jafar151/three-tier-architecture>

- Designed and deployed a high-availability 3-tier AWS architecture across two Availability Zones, separating Web, Application, and Database layers using public and private subnets.
- Configured internet-facing and internal Application Load Balancers, Auto Scaling Groups, and Multi-AZ RDS MySQL to provide scalability, traffic distribution, and database failover.
- Implemented layered security using AWS WAF, Security Groups, IAM least-privilege roles, isolated subnets, VPC Flow Logs, and CloudTrail for traffic control, protection, monitoring, and auditing.
- Configured CloudWatch and SNS for infrastructure monitoring and real-time alerts, with Systems Manager Session Manager for secure keyless EC2 administration.

End-to-End DevOps CI/CD Pipeline | <https://github.com/Jafar151/End-to-End-DevOps-CI-CD-Pipeline>

- Built an end-to-end CI/CD pipeline using Jenkins and GitHub to automate source-code checkout, application build, code-quality analysis, security scanning, Docker image creation, and deployment.
- Integrated SonarQube, OWASP Dependency-Check, and Trivy to perform code-quality, dependency, filesystem, and container security scanning before deployment.
- Containerized the BookMyShow application using Docker, pushed images to Docker Hub, and automated deployment to an AWS EKS Kubernetes cluster using Kubernetes manifests and kubectl.
- Implemented Prometheus and Grafana monitoring for Jenkins and infrastructure metrics, with automated Jenkins email notifications for build success or failure.

Air Quality Monitoring Through Mobiles and Stations | <https://github.com/Jafar151/air-quality-monitoring>

- Built a web-based Air Quality Index (AQI) monitoring system that aggregates real-time pollutant data (PM2.5, PM10, CO, NO2, O3, SO2) from public APIs, IoT sensors, and monitoring stations, dynamically computing AQI values instead of relying on static sensor readings.
- Developed a location-aware search feature (GPS + manual input) with an interactive frontend for visualizing AQI trends, city-wise pollution rankings, and historical data through dynamic charts.
- Engineered a Python-based prediction pipeline using Scikit-learn/TensorFlow to forecast AQI trends and generate personalized health alerts based on pollution severity.
- Designed a full-stack architecture (Flask/Django backend, React/JS frontend, MySQL/MongoDB/Firebase database) integrating AQICN/OpenWeatherMap APIs, with data normalization to ensure consistent, reliable pollution assessment.
